

Invisible Premium Sound Systems

Undisturbed interior design

LoftSonic integrates the highest level of music enjoyment seamlessly and invisibly into architectural products, furnitures and designs by factory, merging them into a unique symbiosis of visual and audiophile perfection.

The focus is on undisturbed interior design. Technology is completely hidden in the background and transforms wood, laminates and drywall materials as well as many other materials such as natural or artificial stone, mosaic, metal and glass into audiophile sound surfaces.

Immersive sound experience

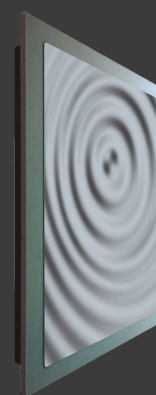

LoftSonic plays in its own league, taking the sound quality and variety of invisible audio systems to an unparalleled level.

It provides the absolute audiophile fun factor with a real cinema and live sound feeling.

LoftSonic speakers are very flat, vibrating sound surfaces

The invisible LoftSonic technology is integrated on the back of the original material of an architectural product, furniture or design.

The vibrations are generated directly in the surface material by electromagnetic exciters. It thus becomes a sound surface itself, like the vibrating body of an acoustic musical instrument, for example.

Material example:
Integration in a drywall panel

Hearing is believing

Book your personal appointment now for your LoftSonic Sound & Style session in an extraordinary environment. The E 318 high end sound studio in Frankfurt is waiting for you.

Experience precise, immersive sound that can be seamlessly integrated into your interior design - invisible in walls and ceilings behind paint and wallpaper or in high-quality materials such as fine veneers or natural stone.

Look forward to emotional moments ...

- Real HiFi sound from natural stone
- Immersive 7.3.4 cinema experience in the living room with goosebumps guaranteed
- Precise, spatial sound without compromising on interior and materiality
- Personal advice from the manufacturer and developer

Immersive, invisible living room cinema

Real HiFi sound from natural stone

Sound enjoyment everywhere in the room

The wide 180° sound radiation from the low to the high tones creates a very homogeneous sound image. This means you can enjoy wonderful sound from everywhere in the room.
